

Focus Question

On the way to school, Mrs Walker dropped all of today's calculations. Can you put them back together again?

$$\begin{array}{r} 9 \quad - \\ 5 \quad + \quad 4 \end{array}$$

Let's learn some new maths language!

inverse

inverse means opposite

I am learning to find the inverse

Let's Learn

We can use inverse to solve subtraction calculations.

$$16 - 8 =$$

Inverse would be to use addition to solve this.

How many more do I count on from 8 to get to 16?

Practice doing some mentally.

I am learning to find the inverse

Let's Learn

We can also use inverse to solve missing number problems.

$$11 + ? = 16$$

$$16 - 11 = ?$$

To solve this you would use the inverse-subtraction.

I am learning to find the inverse

Let's Learn

Practice these missing number problems using inverse:

$$? + 5 = 8$$

$$? - 6 = 6$$

$$? - 11 = 6$$

$$? + 4 = 13$$
