I am learning to choose appropriate representations of data

We would like you to carry out a nature survey. This can be:

- Looking out of your window counting different types of birds.
- Going into the garden counting types of shrub, flower, or insect.
- You could go for a walk and count different types of tree.
- Go to the beach (stay at a safe distance from others) and count types of shells.

Keep count of your natural things using a tally chart.

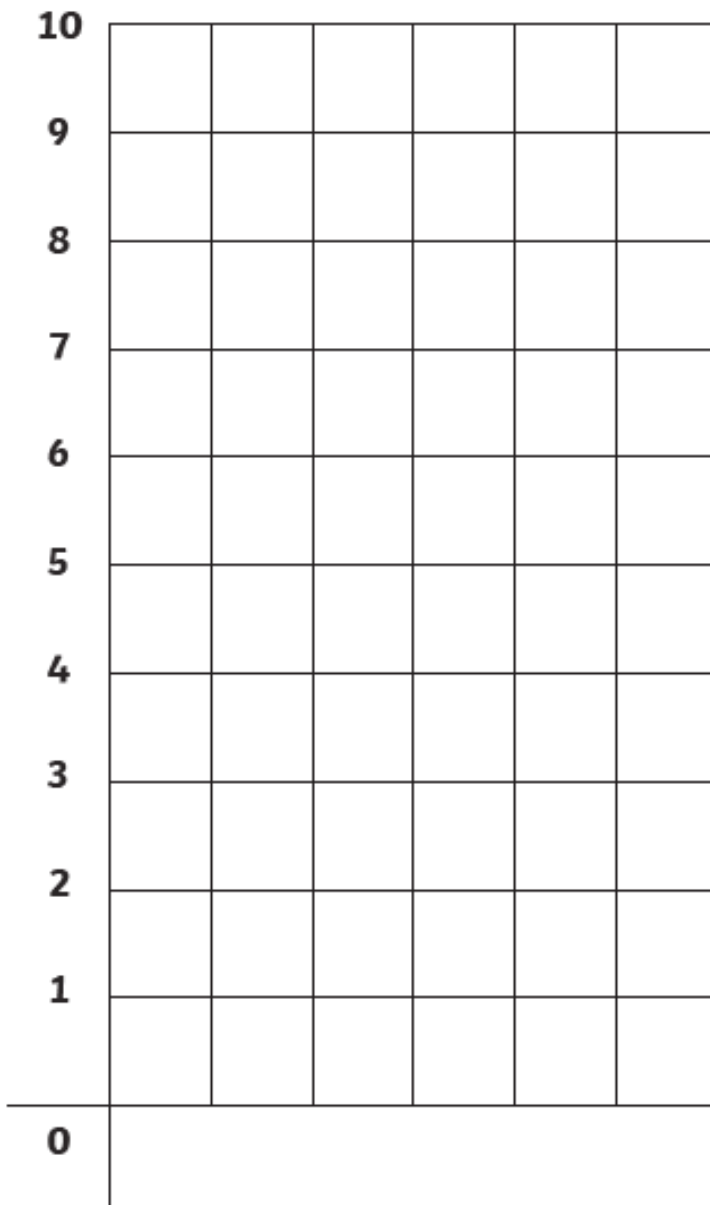

tally						
total						

Remember

4 lines and then cross to make 5

Then we'd like you to create a graph that shows your findings. See next page...

Questions

1. Which one is the least?

2. Which one is greatest?

3. Are any of them equal?

4. What is the difference between the greatest and least?

You could create a pic collage of the steps and some photographs of the different types of tree, insect, shell, shrub or flower.
