I am learning to solve problems involving money using the four operations

Today we would like you to spend some money (virtually).

Warm up activity choose one of the two below

- Maybe you have a receipt from your parent's food shop - choose 6 items and add them using the formal written method. Now imagine you pay for those with a £10 or £20 note. How much change would you receive? Show your working out.
- Set up a shop and price some items, ask a family member to visit your shop. Add up the items they buy, calculate the change they will need from a note. (Take some pictures of your shop and put it on the padet)

Main activity

Look at one of the following online retailers

www.sainsburys.co.uk

www.tesco.com/groceries/

www.argos.co.uk/

Choose one of the following ideas

- Plan a menu for a special meal with a main course, dessert and a drink for four people. Look up the ingredients and calculate the total cost. Then work out how much it would be per person.
- Plan a party for 20 people - you will need food, drink, decorations, maybe even party games and prizes. Add up the total cost making sure you have enough of everything for each person.
