I am learning to interpret data in a table

This table shows where 1000 people went on holiday in 2018 and 2019:

	2018	2019
Spain	170	252
England	398	178
Scotland	221	120
Wales	30	154
USA	181	296

Look at the table:

How many people went to USA in 2018? \_\_\_\_

How many more people went to USA in 2019? \_\_\_\_

Which country had the most visitors in 2018? \_\_\_\_

Which country had the most visitors in 2019? \_\_\_\_

Which country had the **greatest increase** in visitors from 2018 to 2019? \_\_\_\_

How many more people went to Scotland than to Wales in 2018? \_\_\_\_

Which country had the **least** visitors in 2019? \_\_\_\_

Which country had the **least increase** in visitors from 2018 to 2019? \_\_\_\_

## Challenge

- Think of a survey you could complete in your family - favourite holiday destinations, food, drink, animal, TV program, or place to visit.
- Create a table of results
- Write some questions that link to your data
