I am learning to read and plot coordinates in four quadrants.
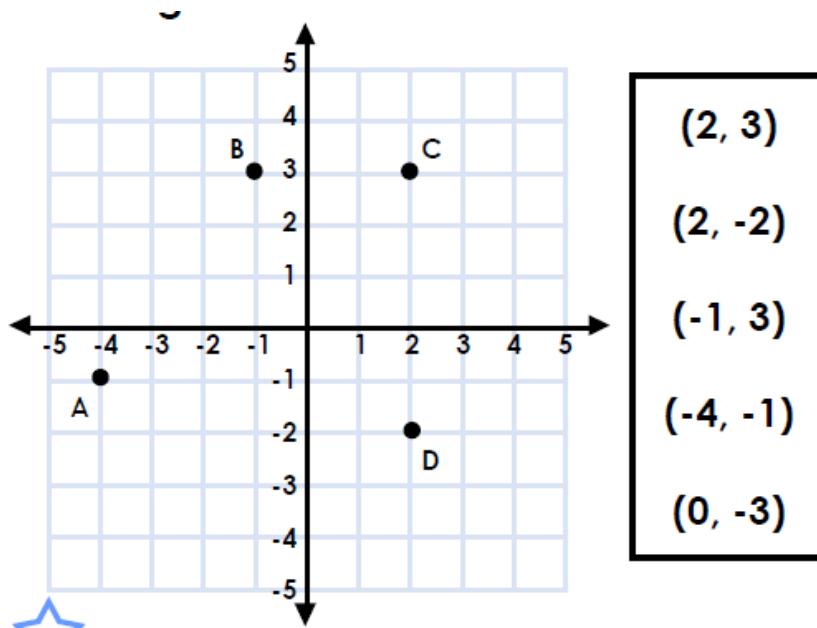

These coordinates are to be plotted on a grid with four quadrants.
The same rule applies:
Along the corridor (x axis) first
Up or down the stairs (Y axis) next.

1. Match the coordinates to the points on the grid.

(2, 3)

(2, -2)

(-1, 3)

(-4, -1)

(0, -3)

2. Write the coordinates for the letters A to H

3. **Plot the coordinates and label them with their corresponding letter.**

A. (-2, 1)

B. (4, 1)

C. (-2, -4)

D. (4, -4)
