

I am learning to find the difference.

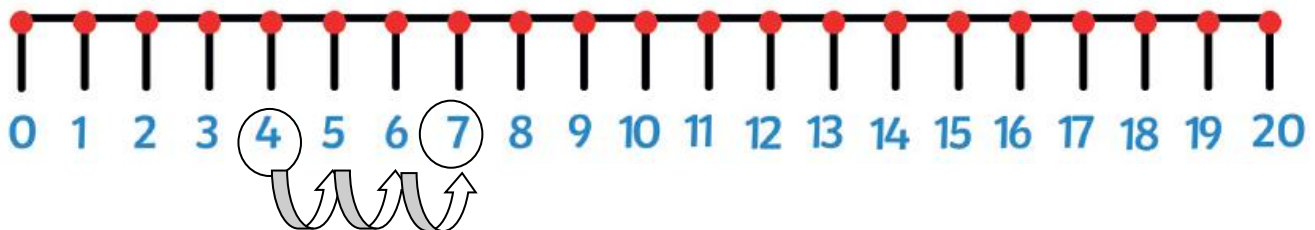

1. The giraffe at the zoo is 7m tall. The rhino is 4m tall.
What is the difference between their heights?

Let's do this one together...

To find the difference we look at how much taller the giraffe is by counting on from 4 until we get to 7.

When we count our jumps, you can see that the difference between 4 and 7 is 3m.

2. A ruler measures 30cm. A pencil measures 21cm. What is the difference between them?
3. Josh's skateboard measures 50cm long. Callum's skateboard measures 60cm. What is the difference between them?
4. Jimmy the dog is 25cm tall, Danny the dog is 56cm tall. What is the difference between their heights?
5. Group A's plant grew 24cm tall. Group B's plant grew 13cm tall. What is the difference between them?

Challenge - Can you make up your own difference word problem?
