<u>Monday 15th June</u>

<u>I am learning to find equivalent fractions</u>

Look at how the denomoator has changed. Use multiplication to help you. Whatever you do to the denominator, you must do to the numerator.

1.
$$\frac{1}{2} = \frac{\square}{4}$$

2.
$$\frac{1}{12} = \frac{\square}{24}$$

3.
$$\frac{1}{10} = \frac{\square}{20}$$

4.
$$\frac{1}{8} = \frac{\square}{16}$$

5.
$$\frac{3}{20} = \frac{\square}{40}$$

6.
$$\frac{1}{6} = \frac{\square}{12}$$

7.
$$\frac{1}{5} = \frac{\square}{10}$$

8.
$$\frac{1}{4} = \frac{\square}{16}$$

9.
$$\frac{3}{10} = \frac{\square}{20}$$

10.
$$\frac{1}{3} = \frac{\square}{12}$$

11.
$$\frac{7}{20} = \frac{\square}{40}$$

12.
$$\frac{3}{8} = \frac{\square}{16}$$

13.
$$\frac{2}{5} = \frac{\square}{20}$$

14.
$$\frac{5}{12} = \frac{\square}{24}$$

15.
$$\frac{19}{20} = \frac{\square}{40}$$

16.
$$\frac{3}{5} = \frac{\square}{20}$$

17.
$$\frac{5}{8} = \frac{\square}{16}$$

18.
$$\frac{2}{3} = \frac{\square}{6}$$

19.
$$\frac{3}{4} = \frac{\square}{8}$$

20.
$$\frac{4}{5} = \frac{\square}{10}$$
