

24/6/20 - Maths

Skill: Calculating fractions of amounts.

Steps to success:

1 - divide the denominator by the whole number

2 - multiply that answer by the numerator

E.G:  $\frac{3}{4}$  of 16 =  $16 \div 4 = 4$  (this tells you what  $\frac{1}{4}$  of 16 is)  
=  $4 \times 3$  (because you want to know what  $\frac{3}{4}$  is)  
= 12

Complete:

Shade in the pictures and write the fraction of amount (like the model shows above):

1.  $\frac{1}{4}$  of 12

2.  $\frac{2}{7}$  of 14

Find the amount and show your working:

3.  $\frac{2}{8}$  of 24

4.  $\frac{3}{5}$  of 55

5.  $\frac{7}{9}$  of 63

6.

5. Aleeza says:

I drank  $\frac{3}{5}$  of a  
60ml bottle of  
water.

Sam says:

I drank  $\frac{2}{6}$  of a  
60ml bottle of  
water.

Who drank the most water? Explain your answer.

7.

7. Michelle says:

I drank  $\frac{7}{9}$  of a  
36ml bottle of  
water.

Peter says:

I drank  $\frac{4}{6}$  of a  
36ml bottle of  
water.

Who drank the most water? Explain your answer.

8.

2. Use the digit cards to make this calculation correct.

---

of 15 = 5

Is there more than one solution?

9.

4. Use the digit cards to make this calculation correct.

---

of 54 = 18

Is there more than one solution?
