I am learning to convert between imperial and metric measures

$$2 \text{ inches} = 5 \text{ cm}$$

Use this fact to complete these number sentences:

1. 20 inches = _____ cm

2. _____ inches = 10cm

3. 25 inches = _____ cm

4. _____ inches = 30cm

Plot these points on the conversion graph - on the sheet below.
Join the points with a line. (You should have a single straight line starting at (0, 0).)

Remember to label your axis

Use your graph to estimate the answers for these conversions.

a. 17.5 inches = _____ cm

b. _____ inches = 70cm

c. 40 inches = _____ cm

d. _____ inches = 300cm
